

OpsPilot AI - Business Plan

AI-Powered Operations Copilot for IT Operations, DevOps and SRE Teams

Executive Summary

OpsPilot AI is an AI-powered operational intelligence platform designed to help IT Operations, DevOps and Site Reliability Engineering teams detect incidents, analyze root causes, investigate alerts and improve service reliability.

Problem Statement

Modern enterprises generate massive amounts of operational data. Teams spend significant time manually correlating alerts, logs and incidents, resulting in longer outage durations and higher operational costs.

Solution

OpsPilot AI leverages Google Gemini to analyze operational events, identify anomalies, determine probable root causes and provide actionable remediation recommendations through a unified dashboard experience.

Business Model

OpsPilot AI follows a Software-as-a-Service (SaaS) model. Revenue is generated through subscription plans based on monitored services, users and operational workloads. Enterprise customers can purchase premium analytics, integrations, automation workflows and dedicated support.

Target Customers

Enterprise IT teams, DevOps teams, SRE organizations, managed service providers, cloud operations teams and digital businesses that require high service reliability.

Future Growth Strategy

The platform will expand through enterprise partnerships, cloud integrations, AI-driven automation features and additional operational intelligence capabilities.

Current Status

OpsPilot AI is currently a hackathon prototype and proof-of-concept. Revenue has not yet been generated. This document represents the intended commercial strategy for future product development and market adoption.
